WRAG

Powerswing Post Drivers

THE FUTURE IN FENCING

WRAG Powerswing Post Drivers

WRAG have been manufacturing Post Drivers for 25 years. With the help of professional users, fencing contractors, farmers, the occasional user and plant machinery operators, WRAG has developed Post Drivers that are second to none. The versatility and the manufacturing quality surpasses all our competition.

All Powerswing models work to a rear position for extra reach or alternatively will hydraulically slew through up to 180 degrees to enable the operator to work up a fence line. The Hydraulic Slew enables the operator to work anywhere within the 180 degrees dependant upon model. For example in awkward corners, irregular boundaries and around obstacles, keeping the machine 'operator friendly' and downtime to an absolute minimum.

Even though 200kg models are adequate for most sized jobs, a 300kg hammer is an option on most models and the powerful Diadem model comes with a 400kg hammer – important when speed is optimum.

- **Manufactured to the highest standards** – build quality is second to none.
- **Versatile** – Can work anywhere within 180 degrees dependant upon model.
- **Versatile** – No awkward corners impossible. Drive posts where they need to be driven.
- **Versatile** – The tractors position is less integral giving you more speed and manoeuvrability.
- **Versatile** – Modular design allowing complete choice and flexibility of options allowing you to bolt on extras over time.
- **Post Plate** – bespoke postplates available for any specific post application.
- **Weight options** – 100kg/150kg/200kg/300kg/400kg
- **Net Unroller**
- **Rock Spike** – The Rockspike makes light of hard work. It gives a pilot hole where difficult terrain could prevent posts being driven. Whether the terrain is stone, flint, shale, frost hard or just simply hot and dry the job will always get done.
- **Tow Bar**
- **Electric control** (option for Diadem and Opus)

The best way to predict the future... is to Invent it

Powerswing Diadem

The ultimate in versatility and power. Engineered to carry an impressive 300kg or 400kg hammer. The combination of the hydraulic beam, the mast and the unique beam clamp, gives the Diadem a complete range of movements for those times when you need some extra punch and speed.

Beam Clamp
Ensures the beam remains precisely in position, reducing twisting and wear (patents pending).

"I can agree any job and know I can go straight in, irrelevant of conditions because I know the machine will drive posts into and through anything"

"The Diadem can be put into any position and can drive a post in at any angle, anywhere"

Powerswing Opus

The Diadem as the name suggests is WRAG's jewel in the crown but often the tractor requirement is greater than large estates and contractors want to assign to fencing duties. So the Opus was introduced. It has all the attributes of the Diadem – versatility, accuracy and ease of use. The engineering, the combination of powerbeam, powertilt and mast control is as the Diadem but suited to 80 – 100hp tractors. Thereby allowing the ultimate machine to reach a wider audience.

"A new era for indispensable post drivers has arrived. The Opus compliments the most modern powerful post driver range on the market today – WRAG you've done it again!"

Powerswing Commander XL

Building on the highly successful Commander X, WRAG introduced the Commander XL. Whilst offering all the versatility of its sister, the Commander XL has the added benefit of a telescopic beam. Used in conjunction with the Powerslide headstock, fencing in awkward field corners or over a ditch will no longer be difficult at best or even impossible.

"It can get into all the awkward corners and spaces that no other can get to"

Powerswing Commander X

If you are the owner of a large estate or a contractor the Commander X is engineered with you in mind. Whether used in part of a team or as a one man operation the Commander X towers above the competition. It has versatility and flexibility second to none.

Powerslide Headstock
The Powerslide Headstock was designed for Post Drivers by WRAG. Now it has revolutionised the Post Driver industry but the original is still the best! In conjunction with the beam it allows the Post Driver to angle precisely where needed whether in a rear position or side position. Awkward 'no go' areas will become a thing of the past.

"I looked high and low - and bought the WRAG machine because of its sheer versatility. I couldn't find another to match it"

Powerswing Basic Range

BASIC XL

Bridging the gap between the Commander models and the Basic range, the Basic XL is ideal for the user who doesn't require the power slide headstock but wants a good value and efficient post driver for larger projects.

BASIC POWERTILT

Allows the mast to work anywhere within 360° which means you will always get the mast into an upright position.

BASIC SEMI

A highly popular option built with small contractors in mind, the Basic Semi has 2 of the most popular Basic options already factory fitted as standard.

BASIC

The basic is of modular design. The user can add some or all of the options across a period of time in the order that best suits them.

"The Basic Powerswing was the best value around and because WRAG have this add-on arrangement I tailored my machine to suit my increasing business - well done WRAG!"

Penna

The Penna is designed for operators who do not require a swing around system. It has a telescopic side shift always giving that flexibility of sliding 'in and out' for post alignment. The introduction model has a manual mast upright adjustment but a hydraulic adjustment is an option as is mast tilt and powerleg. The Penna200 and Penna300 have proved to be a good option for tractor mounted linkage and telescopic handlers.

"A good option for tractor mounted linkage and telescopic handlers."

Thrift

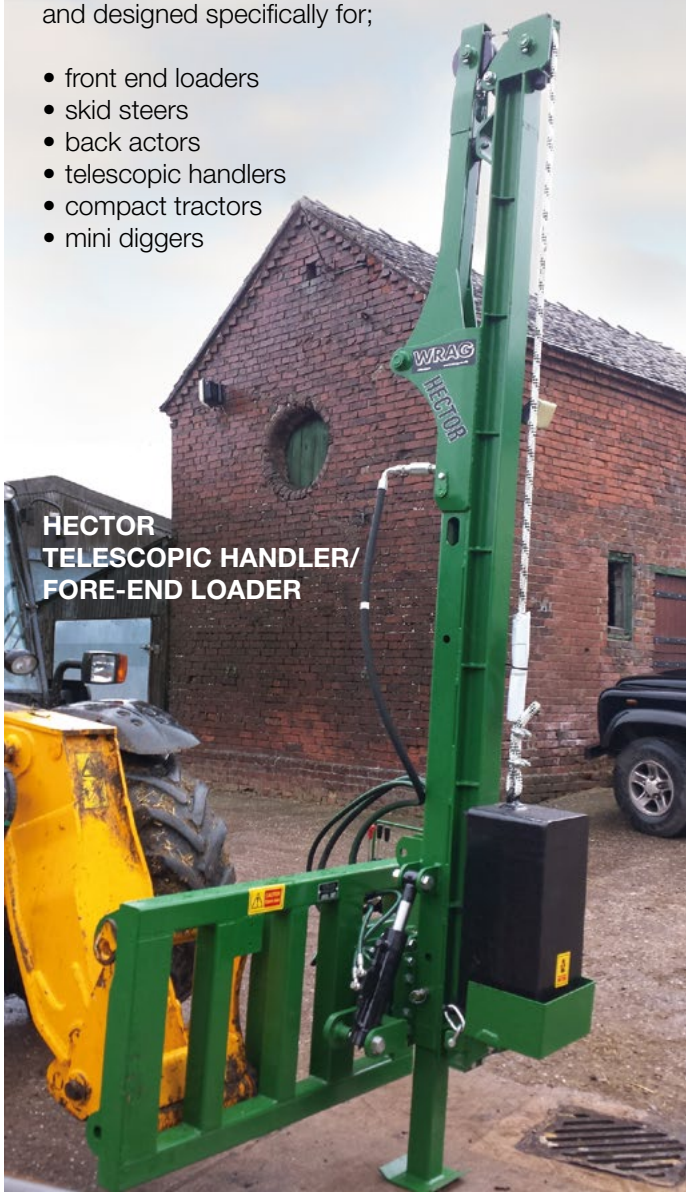
Ideal for occasional fencing and general farm work the Thrift is supplied with a 200kg hammer and can be rear mounted, or free standing. When unhitched from the tractor, this versitile post driver can stand alone for safe storage.

"Simple, easy to use, cost effective machine for a small operator"

Hector Range

Standing smartly alongside its stablemates in the WRAG range, the Hector is engineered and designed specifically for;

- front end loaders
- skid steers
- back actors
- telescopic handlers
- compact tractors
- mini diggers



HECTOR
TELESCOPIC HANDLER/
FORE-END LOADER

HECTOR
SKIDSTEER

HECTOR EXCAVATOR
2 - 30 TON

HECTOR EXCAVATOR
1.5 - 2.5 TON

HECTOR
COMPACT
